

1" DRY-SHUT SYSTEM

AUTO SHUT-OFF POLYPROPYLENE COUPLING
REDUCE SPILLAGE AND WASTE

INTRODUCING DRY-SHUT FROM CPP

The Dry-Shut from CPP is a precision moulded minimum spill coupling for low pressure liquid transfer.

On disconnection the poppets automatic close and shut off the liquid flow, resulting in minimal residual loss or air inclusion. This simple ISO "B" type operation makes it easy to handle with no levers or switches to operate. Our Dry-Shut couplings are ISO 7241-1 series B (ISO-B) interchangeable.

TECH SPEC

Max working pressure: 100 psi (7bar)

Flow rate: 168 L/min (45 USG/pm)

Compatible: ISO 7241-1 (ISO-B)

IMPORTANT: As with other ISO-B type systems there is an approx 15ml of fluid that could discharge on opening and usual drip tray/bunding should be used.

1" DRY-SHUT SYSTEM

STANDARD PARTS TO ADAPT IBC'S & HOSE CONNECTIONS

TECH SPEC

At **CPP®** we have developed a range of easy fit convertors, adaptors and fittings to complement our **DRY-SHUT** coupling system. They are precision moulded in our factory in the UK, all come with seals for a leak free connection.

Max working pressure: 100 psi (7bar)

Body Material: Polypropylene

O-rings & Gaskets: Olefin elastomer
